## 600V 0.26Ω N-channel MOSFET

### ■ Description

Superior 6<sup>th</sup> generation SJ MOSFETs (S6-series) are cutting-edge high voltage power MOSFETs, based on Magnachip's extensive design expertise and years of experience. The main strengths of S6-series are low on-resistance, low gate charge and reduced tendency for ringing. As a result, its switching loss is very low, making it optimized for switching applications. Moreover, these user friendly devices offer the advantages of improved ruggedness and remarkable ESD capability by integrated Zener diode, making it an ideal choice for designers.
